Business Description: Cooker Shop

1. Business Overview

The Cooker Shop is a physical retail store that specializes in selling different types of cookers from various brands and manufacturers. The shop serves households, restaurants, and small businesses by providing cooking appliances along with delivery and installation services.

Currently, the business **does not have a website or any online system**. All operations are done manually inside the store or through phone communication. This creates several limitations in reaching customers and managing operations efficiently.

The main goal of this project is to develop a **complete website system** that allows the business to operate online, improve customer experience, and organize internal processes.

2. Current Problems & Challenges

The Cooker Shop is facing several problems due to the absence of a website:

- Customers must visit the store physically or call to ask about products.
- There is **no online catalog** to browse or compare cookers.
- Orders are recorded manually, which may lead to errors or loss of data.
- Delivery and installation scheduling is not organized properly.
- Limited ability to reach new customers outside the local area.
- No system to track customer orders or history.
- Customer support is handled manually, which causes delays.

3. Services Offered (Current State)

The Cooker Shop currently provides the following services:

- Selling cookers (gas, electric, induction, hybrid)
- Helping customers choose products inside the store
- Accepting orders in-store or by phone
- Providing delivery service
- Offering installation service
- Accepting payments (cash or card)

All these services are done **manually without a digital system**.

4. Proposed Solution (Website System)

To solve these problems, the business needs a website that includes:

- Online product catalog with full details (price, brand, features)
- Search and comparison functionality
- Online ordering system
- Delivery and installation scheduling
- Secure online payment options
- Customer accounts to track orders
- Admin dashboard for managing products and orders

This system will improve efficiency and expand the business reach.

5. Business Capacity

- Serves around **350 customers per month**
- Offers approximately **60 cooker models**
- Sells about **220 units monthly**
- Handles multiple deliveries and installations daily

6. Business Process (After System Implementation)

- Customer visits the website
- Browses and compares products
- Selects a cooker
- Places an online order
- Completes payment
- Receives order confirmation
- Delivery and installation are scheduled
- After-sales support is provided

7. Employees and Roles

- Store Manager (1): Manages operations and staff
- Sales Representatives (3): Assist customers with product selection
- Delivery Personnel (2): Handle delivery of products
- Technicians (2): Perform installation and maintenance
- Customer Support Staff (2): Handle customer inquiries and complaints

Total employees: 10

8. Users and Stakeholders

- Customers: Individuals, families, restaurants, businesses
- Suppliers: Provide cooker products
- Employees: Manage daily operations
- Delivery & Installation Teams: Ensure service execution
